

Raman Measurement of Carotenoids in Living Tissues

A validated method for determining meaningful aspects of human health

Over 50 full-length peer-review articles validate the use of Raman spectroscopy for the measurement of carotenoids in living tissues. An additional 14 abstracts presented at scientific symposiums further confirm the validity of this method as a meaningful health parameter.

The Pharmanex BioPhotonic Scanner uses resonant Raman light to detect concentrations carotenoids in *intact* human skin as an indicator of nutritional intake and *in vivo* antioxidant status. Prior to being adapted for measurements in human skin, Raman resonance was validated for detection of carotenoid concentrations in *intact* human retinas (an indicator of macular health). Well over a dozen peer-reviewed articles have been published on the use of Raman spectroscopy to detect macular carotenoids *in vivo*⁴⁵⁻⁶⁰. Raman spectroscopy has also been validated as an accurate measurement of skin carotenoid concentrations. Pharmanex has published two full-length studies in English^{1,2}, and an additional two full-length studies in Chinese^{3,4} (Chinese publications presented data that is entirely unique from data published in English journals; the Chinese papers are not simply translations of the English publications).

In addition to research conducted by Pharmanex scientists, seven independent research groups have used the Pharmanex BioPhotonic Scanner to conduct their own studies—which has led to the publication of at least six peer-review, full-length scientific articles⁶⁻¹¹, and three scientific abstracts^{61, 69, 73}. The Pharmanex BioPhotonic Scanner is highlighted in the highly respected textbook: *Krause's Food, Nutrition and Diet Therapy* (12th Edition)¹³. It has also been given a complete chapter in the book *Carotenoids and Retinoids: Molecular Aspects and Health Issues*¹², which was edited by the distinguished Dr. Lester Packer (Father of the Antioxidant Theory). At least 14 additional abstracts of studies which used the Pharmanex BioPhotonic Scanner have been presented in scientific meetings around the world⁶¹⁻⁷⁴.

Pharmanex is not the only research group that has used and validated Raman spectroscopy for the measurement of skin carotenoid concentrations as a meaningful biological parameter. At least five other research groups (all disinterested in Pharmanex, Nu Skin, or the sale of dietary supplements) have designed their own Raman spectrometers to measure skin carotenoids. From these five research groups at least 31 full-length peer-reviewed articles have been published¹⁴⁻⁴⁴.

The following full-length studies are co-authored by at least one in-house Pharmanex scientist, and each of the following four studies used the Pharmanex BioPhotonic Scanner:

1. Zidichouski JA, Mastaloudis A, Poole SJ, Reading JC, Smidt CR. Clinical validation of a noninvasive, Raman spectroscopic method to assess carotenoid nutritional status in humans. *J Am Coll Nutr.* 2009 Dec;28(6):687-93. *Abstract available at:* <http://www.ncbi.nlm.nih.gov/pubmed/20516269>

Book chapters or sections that discuss the Pharmanex BioPhotonic Scanner and related research:

12. *Carotenoids and Retinoids: Molecular Aspects and Health Issues.* Gellermann W, Zidichouski JA, Smidt CR, Bernstein PS. Raman Detection of Carotenoids in Human Tissue. In: Packer L, Obermueller-Jevic U, Kraemer K, and Sies H, eds. Champaign, IL: AOCS Press, 2005: Ch. 6, 86-114.
13. Mahan LK and Escott-Stump S. (Eds.). *Krause's Food, Nutrition and Diet Therapy*, 12th Ed. Philadelphia, PA: Saunders 2007; Ch. 15, 427-428.

Krause's Food & Nutrition Therapy has been considered one of the most authoritative nutrition texts for over 50 years worldwide. It provides a basic overview of nutrition as well as in-depth information on up-to-date nutrition therapies for medical conditions. Krause's is a text used by students in many allied health programs as well as other disciplines interested in the theoretical and clinical knowledge of the nutrition care process. It is commonly used as a reference for dietitians, nurses, doctors, dentists, life coaches, health educators and child development specialists.

Although Pharmanex (Nu Skin) owns exclusive rights for use of Raman spectroscopy in *for profit* settings, other research groups are permitted to develop their own Raman skin carotenoid devices for research purposes. The following 29 studies use Raman spectroscopy to measure skin carotenoid concentrations as a meaningful parameter of human health. The Raman devices used in these studies were not the Pharmanex BioPhotonic Scanner. The fact that research groups other than Pharmanex (Nu Skin) have validated Raman measurement of skin carotenoids as a meaningful health parameter further confirms the legitimacy of this method. Full-length versions of the following studies can be purchased at the PubMed links provided below (abstracts available free of charge):
